

Inventory Management Streamlined for

SPEED & ACCURACY

REAL-TIME ANSWERS TO REAL-TIME QUESTIONS

- > What's our on-hand inventory?
- > What needs reordering?
- > What products are about to expire?
- > Did we account for all the devices used on this case?
- > Was the patient billed correctly?

The Cenbion Inventory Management System answers these questions quickly and easily by improving the way assets are managed in your EP, Cath and Radiology labs. With Cenbion, the answers are right in your hand.

ASSET MANAGEMENT MADE EASY AND AFFORDABLE

The Cenbion system uses mobile handheld scanners to track your medical products and devices as they arrive at your lab. Data capture is as simple as activating the scanner and pointing it at the barcode on each product, patient ID bracelet or customized procedure manual. At the end of the day, the captured data is uploaded to a central database.

Cenbion's detailed, real-time information helps you quickly and accurately:

- > Manage cases and inventory
- > Locate and organize assets
- > Determine full-time-equivalent utilization
- > Bill patients
- > Order inventory
- > Generate reports by patient case, vendor, procedure or product
- > Print reports to track monthly trends, annual product use, and case charges and costs

EASY TO INTEGRATE

While Cenbion can operate as a stand-alone Cath or EP lab inventory management system, it can also seamlessly interface with your existing hospital system. This allows you to quickly bring your system online and immediately leverage the benefits of a dedicated asset-management system.

IN-DEPTH ON-HAND REPORTS

Cenbion uses our proprietary Inventory Assessment Software to determine your lab's current on-hand inventory. The data collected can be as little as product number and description or as much as manufacturer, number of units on hand and expiration dates, just to name a few. Once the assessment is complete, you'll receive a comprehensive, easy-to-read report that lists what you have on hand so you can easily track your assets, rightsize your inventory and optimize your product mix.

"Thanks to our new system, we were able to place a \$900,000 order of pacemakers and defibrillators. By knowing precisely what we needed and by placing a bulk order, we saved 12 percent of the total cost, equaling \$127,000 on that shipment alone."

Dave Strelow, director of Cardiovascular Lab Services, Saint Luke's Health System, Kansas City, Missouri

FREE UP YOUR INVENTORY DOLLARS

When you know your charges are fully captured, you can order in bulk and earn larger vendor discounts, saving you hundreds of thousands of dollars from day one. Improved tracking and control also allows you to reduce total on-hand inventory while accurately associating each product/device with the correct case.

GREATER CLARITY AND ACCURACY

With Cenbion, patient billing becomes more accurate because you know which products and equipment were used on each case. And when more than one physician is involved in a case, Cenbion eliminates mischarges by confirming who used what supplies.

THE CENBION SYSTEM—DELIVERABLES

Cenbion training is offered at your facility, at your convenience, so you can continue to do what you do best: care for patients. Your system comes with everything you need to realize the benefits of inventory automation, including mobile barcode scanners and easy-to-learn, easy-to-use software that can be effortlessly integrated with your back-office systems. Cenbion technicians will install the software, train your staff, use vendor barcodes or create them for you, and set up back-office interfaces for billing and reordering. We'll also incorporate radio-frequency identification (RFID) to track your inventory and notify you of its expiration and location.

The Cenbion team has extensive experience in hospital inventory and manufacture barcode standards. Our software allows us to read any type of barcode (HIBC, UCC/EAN, UPC-A), and our extensive product database has been in use for nearly 15 years.

CUSTOMER SUPPORT

Cenbion provides world-class support to our customers and maintains one of the highest adoption and satisfaction rates in the industry. One-on-one instructor-led training is customized for each practice, charting style and specialty. This personalized attention will ensure your employees thoroughly understand the system to help you increase your bottom line and improve efficiency.
